PROFESSIONAL SUMMARY

Full-Stack Developer with 4+ years of experience owning backend architecture and frontend delivery across AI-powered SaaS products, ISP platforms, and microservices ecosystems. Specialises in Node.js, Nest.js, React.js, and Python FastAPI — with a strong track record of shipping production-grade features, integrating GenAI workflows (LangChain, LangGraph, OpenAI), and driving measurable improvements in system performance, security, and developer velocity. Thrives in Agile teams and takes end-to-end ownership from API design to cloud deployment on AWS.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Shell Scripting

Frameworks: Node.js, Nest.js, React.js, Python FastAPI

Databases: PostgreSQL, MongoDB

APIs & Messaging: REST, GraphQL (Apollo), WebRTC, Socket.io, Kafka, Kong API Gateway

AI / GenAI: LangChain, LangGraph, OpenAI API, Generative AI Integrations

Cloud & DevOps: AWS EC2, Docker, Prometheus, Grafana, Consul

Architecture: Microservices Design, SDLC, Agile / Scrum

Tools: Git, Postman, VS Code, Cursor.sh, DataGrip, pgAdmin, MongoDB Compass, Bitbucket, Android Studio

NOTABLE ACHIEVEMENTS

- **Covered for 2 engineers mid-sprint:** Solo-owned a full sprint's backlog during a critical staffing gap at Infoobjects, delivering 100% of milestones on schedule with zero quality regressions.
- **Reduced notification latency by ~60%:** Re-architected BMS Notify's dispatch pipeline, cutting average email/SMS/WhatsApp delivery time from ~5s to under 2s across 50,000+ monthly alerts.
- **Accelerated ISP onboarding by 35%:** Overhauled NetManazer's GraphQL API layer, reducing average query response time by 40% and enabling 3 new ISP clients to go live within weeks of integration.
- **Delivered AI interview platform in 6 weeks:** Led full frontend delivery of Vriti.AI's real-time interview module — WebRTC, live transcription, and media recording — from zero to production within a single sprint cycle.

PROFESSIONAL EXPERIENCE

Software Engineer – Full-Stack Developer

Dec 2024 – Present

Infoobjects Software India

India

- Architected scalable backend microservices using Node.js and Nest.js for Vriti.AI, an AI-powered recruitment platform processing 10,000+ candidate records per month.
- Constructed a charting engine generating 8+ chart types from Excel/CSV datasets up to 50MB, cutting report generation time by ~40% for enterprise hiring teams.
- Spearheaded the Kanban-based project-status management system, reducing cross-team sprint-visibility gaps by 50% and eliminating weekly manual status updates.
- Enforced AES database encryption via scheduled cron jobs, achieving full compliance with data-protection regulations and eliminating plaintext PII exposure.
- Launched the AI interview platform frontend — integrating WebRTC, Socket.io, and live transcription — reducing interviewer setup time by 30% and supporting 500+ concurrent sessions.

Software Engineer – Full-Stack Developer

Oct 2021 – Dec 2024

Reliablesoft Technologies Pvt Ltd

India

- Streamlined backend services for NetManazer BMS, serving 20+ ISP clients with real-time network monitoring, billing automation, and bandwidth control.

- Tuned RESTful and GraphQL APIs on Node.js, PostgreSQL, and MongoDB, cutting average query latency by 40% and improving dashboard load times for 1,000+ concurrent users.
- Connected WhatsApp, SMS, and email notification channels via Rapbooster.com, automating 50,000+ monthly client alerts and eliminating manual outreach overhead.
- Shipped BMS Notify, a UI-independent multi-channel notification service handling 3 dispatch channels via REST APIs, adopted by all active ISP clients within 2 months of release.
- Authored shell automation scripts that cut recurring server maintenance tasks from 4 hours/week to under 30 minutes, freeing engineering capacity for feature delivery.

KEY PROJECTS

Kriva AI – Enterprise AI Workflow Platform

Stack: Nest.js, GraphQL, Kong API Gateway, AWS EC2, Prometheus, Grafana, Consul

- Structured a fault-tolerant microservices mesh using Consul for service discovery and Kong Gateway for authentication enforcement across 6 independent services — achieving 99.9% uptime SLA.
- Configured Prometheus alerting rules and Grafana dashboards, reducing mean time to detect (MTTD) production incidents from 15 minutes to under 3 minutes.

AI Threat Modelling Platform

Stack: React.js, Python FastAPI, PostgreSQL, LangChain, LangGraph, OpenAI API, AWS

- Orchestrated multi-step LangGraph reasoning agents to automate threat identification across STRIDE and DREAD frameworks, reducing manual security-review time by 70%.
- Applied FastAPI async endpoints with connection pooling, supporting 200+ concurrent threat-analysis requests with sub-500ms average response time.

Vriti.AI – Charting Library & Data Pipeline

Stack: Node.js, Excel/CSV Processing, PostgreSQL

- Engineered a streaming ingestion pipeline to process Excel/CSV files up to 50MB without blocking the main thread, using chunked reads and worker queues to cut peak memory usage by 60%.
- Extended the charting engine with 8 chart types (bar, line, pie, scatter, heatmap, funnel, Gantt, KPI card) configurable via a single JSON schema — reducing client customisation requests by 45%.

NetManazer – Broadband Management System

Stack: React.js, Node.js, GraphQL, PostgreSQL, MongoDB

- Overhauled the GraphQL schema with DataLoader-based batching, eliminating N+1 query issues and reducing database load by 55% under peak ISP traffic.
- Rebuilt the React.js subscriber management dashboard with real-time Socket.io updates, reducing average fault-resolution time from 12 minutes to under 4 minutes.

EDUCATION

Master of Computer Application (MCA)

Bikaner Technical University

2022 – 2025

Rajasthan, India

Bachelor of Computer Application (BCA)

Jai Narayan Vyas University

2019 – 2022

Rajasthan, India
